

The time formula

```
# All of 2017
airbnb %>%
  filter_time(~ "2017")
```

```
# Start of November → End of December
airbnb %>%
  filter_time("2017-11" ~ "2017-12")
```

```
# Start of series → End of December
airbnb %>%
  filter_time("start" ~ "2017-12")
```

Work more naturally with
time series in the tidyverse
