A first attempt - tidyquant

```r
tq_get("AAPL") %>%
  tq_mutate(select = adjusted, mutate_fun = dailyReturn) %>%
  ggplot(aes(x = date, y = daily.returns)) +
  geom_line() +
  theme_tq()
```

- Quickly pull financial data as a tibble
- Apply any xts, quantmod, TTR, and PerformanceAnalytics function
- Pipe the result straight into other tidyverse packages

What an overly gratifying activity. Like, pulling that stock data and plotting it was a minute-long affair (with thinking and getting distracted)! 💪 package *and* tutorial!
